CIAS Meeting Notes June 21, 2011

Agenda:

1. Responses to CANVAS and the Cyber Citizen Forum
2. Colloquium results
3. Invited to run regional CCDC (Collegiate Cyber Defense Competition)
4. Update on telescope status
5. Update on ARNe status
6. Report on the Capacity Building grant
7. Curriculum
8. IASP Budget

1. We had accolades for CANVAS (Computer and Network Vulnerability Assessment Simulation) and were thanked by the DHS for the Cyber Citizen Forum. These were well-received, especially the CANVAS event. The attendance was good at both.

2. Have just returned from the Information Assurance Educators’ annual conference. We need more DHS public service announcements. October is Cyber Security Month around the world.

3. We talked to the national CCDC and were asked to host the regional event for Kansas, Nebraska, Wyoming, the Dakotas and maybe New Mexico. We will collaborate with DU and Airforce.

   We voted and everyone agreed to hosting the CCDC event. The director has approved our pursuing the regional CCDC contest.

4. One of the major efforts of the Center is the radio telescope project. We have recorded signals. The physics department and astronomy have been helpful. The latest is that we had an equipment failure. The digital inclinometer had to be repaired. We got the controls up, and are close to publishing remote controls. We have been able to observe the galactic core, are waiting to make formal measurements of the sun.

5. We have made tremendous progress with ITS-- within this year we will have an integrated Regis cloud, a much more stable and powerful network. We are meeting with ITS soon.

6. At the colloquium we got a list from UT San Antonio to do the nationals. The Center will sponsor a workshop through the grant to see where it will go. The National workshop will be at the DTC, and have a virtual component.
7. We are working on the Software Assurance curriculum, and on mobile devices. We’re continually working on the curriculum.

8. We have received the IASP budget.
