Our school of Humanities & Social Sciences and the School of Computer and Information Sciences Information Assurance program are to receive special marketing efforts from an experienced company that will increase the demand for the SCIS’s virtual labs.

We are gathering before and after feedback from students who take a forensics class either with a lab, or without one so the results of the two formats can be compared.

The radio telescope project is moving along. Students are working on SCADA, realtime UNIX, a computational cluster for data deconvolution, and a data warehouse.

The CISSP meeting is a study group sponsored by the Center which meets every other week at the ALC.

There's a discussion of the use of VMware in the VI3 infrastructure.
