Getting and Using CA Properties

Try your own ideas.
The Properties

Every simulation has a set of properties associated with it.
- The number of rows.
- The number of columns.
- The maximum number of states.
- Etc.

To use the properties, you will need to import the CurrentProperties class.

Now you can read these properties at any time. Just call
- CurrentProperties.getInstance().methodName()

For example,
- CurrentProperties.getInstance().getNumRows() will get the number of rows.
- CurrentProperties.getInstance().getNumStates()
- Etc.
